

# WCI Dedicated Internet Access

Choose the right IP solution for your business needs.

WCI's Dedicated Internet Access allows businesses to connect to the Internet through a high-performance IP infrastructure. By providing a range of bandwidth speeds and connection options, WCI allows you to select the most appropriate, most cost-effective Internet access solution for your business.

WCI then provides easy implementation of your Internet solution, plus management and customer support for your WCI IP connection. Your business has the advantage of a single, seamless IP solution designed to meet your most demanding data and bandwidth requirements.

## The Right IP Solution for your Business

Our unique network infrastructure allows WCI to offer Dedicated Internet Access using multiple carriers and technologies. As always, WCI begins by assessing the IP needs of your business and its locations. We then provide an IP solution that links your business to the Internet through our own ISP network infrastructure, through a partner ISP, or through a combination of both.

## Multiple IP Access Solutions

### T1 / DS1

Ideal for small to mid-size businesses that require reliable, high-speed Internet access with dedicated connectivity.

### BONDED T1 (NXT1)

WCI "bonds" together two to six T1's to create a single logical channel ranging from 3 Mbps to 9 Mbps.

### T3 / DS3

Ideal for businesses that require high-speed, high-capacity access to support high-bandwidth applications. WCI offers fractional, full, or burstable solutions from 3 to 45 Mbps.

### OCX

Ideal for large enterprises and ISPs that require mission-critical connectivity and ultra high-speed connections to support high-volume network traffic. WCI offers fractional, full, or burstable solutions from 35 Mbps to 10 Gbps.

### ETHERNET

Ideal for high-end applications, including video-conferencing, VoIP, and Web Hosting. WCI offers full or burstable solutions from 1 to 1000 Mbps.

## Reliability, Scalability, Security

WCI's IP solutions are designed for reliability, with multiple redundant high-speed connections. Also, our IP solutions have the scalability to accommodate your business growth, and the security features to keep data and connections safe and protected.

## BENEFITS

- High-speed Internet connectivity for all your employees.
- Guaranteed bandwidth to meet your data demands.
- The most cost-effective IP solution for your business.
- Multiple, redundant connections with no single IP point of failure in the core.
- Scalability for business growth.
- Easy implementation.

## FEATURES

- Symmetrical upload and download speed.
- BGP routing protocol to integrate multiple IP carriers.
- Industry-leading Service Level Agreements.
- Managed solutions and 24/7/365 support.
