

WCI Private Line Services

Connect business locations and protect critical data on a secure Private Line network.

WCI's Private Line service allows you to connect two or more business locations on a dedicated point-to-point or multi-point network. A Private Line lets you exchange critical business data between locations on a secure and reliable private backbone that is owned exclusively by your company.

WCI offers Private Lines designed to fit the specific needs of your business. You can take advantage of secure high-capacity bandwidth, high-speed data transfer, a reliable self-healing architecture, voice and data consolidation, and 24/7/365 network management.

HOW IT WORKS

WCI installs an end-to-end, full channel platform with customized circuits and fiber-optic connections between your business locations. WCI's T1 networks are the gold standard of quality of service, offering guaranteed better-than-99.9% uptime, top-of-the-line Service Level Agreements, and quicker average time to repair.

Advantages of a Private Line

HIGH-LEVEL DATA SECURITY

A dedicated private network provides maximum protection for transmissions of mission-critical data between your business locations. Unlike traditional services such as ATM and Frame Relay networks, your data does not travel over a shared network infrastructure, but is transmitted securely over your private connections.

HIGH-CAPACITY BANDWIDTH

WCI offers a variety of Private Line speeds, ensuring streamlined, error-free delivery of high-demand voice, video, and data applications. Available Private Line speeds include DS-1 (1.544 Mbps), DS-3 (45 Mbps), OC-x (155 Mbps and up), and Metro Optical Ethernet (10 Mbps to Gig E).

VOICE, VIDEO, AND DATA CONSOLIDATION

A Private Line allows you to consolidate voice, video, and data services on one high-speed, high-performance network. This provides significant cost savings over management of multiple networks.

SCALABILITY OPTIONS

You can easily add additional bandwidth to your Private Line, or connect new business locations as your company grows.

BENEFITS

- Connect two or more business locations on a dedicated Private Line network backbone.
- Achieve high-level security for mission-critical data on a network owned exclusively by your company.
- Better-than-99.9% availability guaranteed.
